

🌟 Interactive storefront preview

Launch a storefront that feels real before signup.

Keep the homepage fun: pick a business type, switch the look, and watch the storefront react instantly. The deeper setup lives in the walkthrough below.

What this section should do next

This is the right place to pass demo data into signup and onboarding. The hero stays light and visual. The walkthrough handles the practical handoff.

Already have admin access?

🔗 CONVERSION-FOCUSED STRUCTURE

The homepage now explains both the CMS workflow and the visual outcome.

Instead of showing disconnected demos, the landing page tells a merchant-friendly story: start with a business type, shape the brand, see the storefront react, and finish with launch readiness.

🏠 Site-type dropdown with demo data

Fashion, skincare, bakery, and electronics now preview different messaging, products, and support structure.

🎨 Realer visual customization

Color and typography shifts now change the preview in a way that feels brand-led instead of purely technical.

🌐 Cleaner publish story

The readiness panel ties together domain setup, payment choice, and content completion in one visible finish line.

Theme packs

Swap palettes quickly and let the preview carry the change through hero surfaces, badges, buttons, and accents.

Typography moods

Preview modern, editorial, and campaign-driven looks to show how a merchant can change personality fast.

Local payment setup

Keep bKash and COD visible in the onboarding story so setup feels practical, not just cosmetic.

Trust-first layout

Sections emphasize support, policy clarity, and social proof so the storefront story ends in conversion confidence.

🕒 DAY-ONE OUTCOME

The page should sell the business upgrade, not just the UI.

Merchants need to understand what they actually get after signup. This section makes the outcome concrete before pricing ever appears.

Storefront homepage with real sections

Branded product grid and preview content

Payment instructions and launch settings

Store slug and shareable preview URL

Editable onboarding after signup

Admin workspace ready for publishing

BEFORE

Selling from inbox threads, posting product drops manually, and answering the same payment questions all day.

AFTER

A real storefront with product pages, branded sections, clear payment instructions, and a cleaner path to checkout.

BEFORE

Launching each campaign from scratch with new posts, new captions, and no reusable page structure.

AFTER

One CMS setup where new campaigns reuse the same launch flow, visual system, and sales-focused page sections.

📁 BUILT FOR DIFFERENT BUSINESSES

Show merchants that the CMS already speaks their category.

A stronger landing page helps visitors recognize themselves quickly. These use cases turn the dropdown preview into a broader sales argument.

Fashion drops

Launch lookbooks, spotlight best sellers, and rotate campaign banners for new arrivals and seasonal drops.

IDEAL FOR APPAREL, ACCESSORIES, AND LIFESTYLE LABELS

Skincare routines

Guide buyers from concern to bundle with ingredient-led sections, trust copy, and routine recommendations.

IDEAL FOR SKINCARE, BEAUTY, AND WELLNESS BRANDS

Bakery menus

Highlight daily availability, pre-order windows, and celebration bundles with a warm, giftable storefront.

IDEAL FOR BAKERIES, GIFT SHOPS, AND FOOD BRANDS

Electronics stores

Pair specs, warranty reassurance, and support details so technical shoppers feel confident before checkout.

IDEAL FOR GADGETS, ACCESSORIES, AND HOME TECH

Trust-ready storefronts

Policy, support, and payment clarity are built into the launch story so the site feels safer from day one.

Local payment fit

bKash, Nagad, and cash on delivery can all be represented in the setup instead of bolted on later.

Real domain presence

Merchants can see how their store name turns into a branded subdomain before they commit to the full setup.

Operational confidence

The landing flow hints at the real admin outcome: products, orders, launch status, and editable store setup.

📋 LAUNCH CHECKLIST

Reduce friction by showing the exact path to launch.

A checklist turns the walkthrough into a promise: the merchant can see exactly what happens next and why the setup feels manageable.

1

Choose the business type that matches the merchant

2

Import a launch-ready visual direction

3

Add store name, hero copy, and announcement text

4

Show local payment and support details clearly

5

Preview the branded URL and launch state

6

Continue into signup with editable prefilled data

⚖️ COMPARISON

Help merchants understand why this beats inbox selling and generic builders.

What merchants need	Inbox selling	Generic website builder	Commerce Engine
Looks like a real brand	Depends on posts and chat screenshots	Possible, but setup is broad and slower	Designed for launch-ready storefront presentation
Local payment communication	Manual replies every time	Usually needs custom setup	Visible in the sales flow from day one
Campaign page updates	Repost and explain again	Flexible, but not merchant-guided	Switch content and themes in a guided flow
Order and store operations	Scattered across chat and notes	Requires more assembly	Connected to the admin workspace and onboarding

🛡️ OBJECTION HANDLING

Answer the hesitation before the visitor reaches pricing.

A high-converting homepage does not wait for the FAQ to do all the work. It surfaces the biggest concerns in plain language earlier in the flow.

Not technical?

The landing page now makes the builder feel guided and editable instead of exposing raw setup complexity.

Already selling on Facebook?

The comparison framing helps merchants see this as a business upgrade, not a total workflow reset.

Need manual payments?

bKash, Nagad, and COD are part of the story early, so the product feels locally practical.

Need a custom domain later?

The preview URL and launch section make the domain handoff feel real before the merchant signs up.

SOCIAL PROOF

A testimonial section belongs on this page.

The interactive demo proves possibility. Testimonials prove trust. Together they make the offer feel safer to buy.

LAUNCHED IN ONE EVENING

"We went from taking orders in Messenger to having a storefront that customers trusted before they even asked a question."

Nadia Rahman
Founder, Luna Skin Lab

CAMPAIGN PAGES UPDATE IN MINUTES

"The biggest win was how quickly we could change the homepage for campaigns. New drop, new colors, new hero, done."

Mahin Islam
Operator, Trendy Closet

CLEARER CHECKOUT, FEWER SUPPORT MESSAGES

"The payment instructions and order flow made us look much more professional than selling from inbox threads."

Tanzim Hasan
Owner, Volt Cart

Packages

Choose the package that matches how serious the store needs to feel.

These plans are shaped around launch quality, operational control, and how much persuasive storefront structure a merchant needs to convert buyers.

Starter

Launch one store with core CMS blocks and manual payments.

Frequently Asked Questions

Clear answers about setup, domains, and how the CMS experience is presented.

How do manual bKash payments work?

Can I connect my own custom domain?

Do I need coding skills to design pages?

How fast can a store go live?

Ready to turn this landing page into a stronger sales demo?

Merchants should be able to understand the setup, feel the design flexibility, and trust the launch workflow within the first scroll. This version gets much closer.
